Cyberjaya, Selangor, MALAYSIA

Life Philosophy

I like to experiment in building things. Experiment helps me to figure out the right way to do something. Sometimes it works. Many times it fails. Failures can teach me to try a different way. In order to keep experimenting, I have created tools and frameworks that can help me to speed up the process. I believe in finding a way to simplify things and to automate things can help. It might help us to concentrate on many other things. Things that probably will lead us to much better things.

Professional Experience

Mercedes-Benz (Malaysia) (<http://www.mercedes-benz.com.my>) Kinrara, Selangor

Senior Software Engineer June 2015 – Now

- Working directly with Daimler TSS in Germany.
- Working closely with teams from Germany and China.
- Responsible in development of a number of applications.
- Full Stack: working on Database, API and front UI.
- Creating custom components for the application.
- Maintaining legacy systems, upgrading to newer modern versions.
- Working in team and practice Scrum.

BT (Malaysia) (<http://www.btplc.com>) Bangsar South, KL

Software Engineer (Sep 2014 – June 2015)

- Maintained batch processing application that handles data to and fro other applications.
- Upgraded legacy systems to modern applications (Rest-API, web UI).
- Designed and implemented service or change requests.
- Practiced continuous integration TeamCity (<https://www.jetbrains.com/teamcity>).

Atex (Asia) Sdn Bhd (<http://www.atex.com>) Damansara Heights, KL

Java Developer (Sep 2011 – May 2014)

- Involved directly in product development of Atex Web CMS (the core engine) since 2012.
- Lead Demo Project in 2013, developing a demo kit used in conference and by sales team.
- Developed Mobile App Kit plugin for the CMS that can be used to turn the front end of the system into mobile-friendly site and mobile client app.
- Managed integration and deployment using Jenkins.
- Other projects:

Agderposten (<http://www.agderposten.no>) (2014) London24 (<http://www.london24.com>) (2013)

Ipswich Star (<http://www.ipswichstar.co.uk>) (2013) Great British Life (<http://www.greatbritishlife.co.uk>) (2013)

Irish Times (<http://www.irishtimes.com>) (2012) Thompson (<http://hr.complianceexpert.com>) (2012)

New Straits Times (<http://www.nst.com.my>) (2012)

*** Reason for leaving: Retrenchment

Commerce Dot Com Sdn Bhd (<http://www.commercedc.com.my>) Petaling Jaya, Selangor

Analyst Programmer (Apr 2009 – Aug 2011)

- Developed web-based Java application (J2EE).
- Created PL/SQL queries such as stored procedures and functions to fetch the business data to improve efficiency.
- Programmed JavaScript for client side validation and drag-and-drop shopping cart to improve user experience (2009).
- Projects; eCat 2.0 (<https://ecat.commercedc.com.my/portal>) (an online catalog system with Web 2.0 features), Supplier Registration System (<https://sr.eperolehan.com.my>), eBid (<https://ebidding.eperolehan.com.my>) (an online bidding system), and ePerolehan (<http://home.eperolehan.com.my/v2/index.php/en>) (an online procurement system that is currently used by the Government of Malaysia)

FlairWork Technologies Sdn Bhd (<http://www.flairwork.com>) KL

Software Engineer (Aug 2008 – Mar 2009)

- Develops a unique in-house framework using PHP, MySQL and AJAX that has been used in most client projects. The framework improves project implementation, reduces development effort and saves resources.
- Projects; Organization Chart System for British American Tobacco/Group Delivery Service (Java, MySQL), Web Portal for Suruhanjaya Perkhidmatan Awam Perak (PHP) (<http://spa.perak.gov.my>), Corporate Website and Online Booking System for a travel agency (PHP, MySQL), Information Risk and Security Monitoring System for MAS (PHP, MySQL, AJAX), English-Malay online dictionary (<http://kamus.flairwork.com>).

Infosys Technologies Limited (<http://www.infosys.com>) Bangalore, India

Internship (May – Jul 2008)

- Trained on Enterprise Application Development mainly in Java and Oracle. Other subjects are HTML, Javascript, DBMS, quality systems, and project management.
- Achievement; scored A in every training modules. (From total 100 people, only 2 scored all A's. I am one of the 2.)

Skali Web Services Sdn Bhd (<http://www.skali.net>) Sentul, KL

Software Developer (Jul 2007 – Apr 2008)

- Lead a number of development project of web portals apart of 450 government agencies using JBoss portal, Java, PostgreSQL.
- Developed a web-based Staff Directory System for the company using Java, Ajax and PostgreSQL.
- Developed a web portal and web components for Young Professional Consultative Society (YPCS) using Joomla, PHP, javascript and mysql.
- Developed a knowledge management portal with Document Management System (Web 2.0) using Neofission (company's licensed CMS), PHP, Ajax and mysql.

Personal Projects

Holiday Calendar Version 2.0 (December, 2018)

Upgraded version of Event Calendar. Re-built from scratch using React and serverless architecture. The original Event Calendar is built with Angular. The new version supports 5 languages; English, German, Chinese, Hindi and Malay. Information on public holidays for 8 countries; Malaysia, US, UK, Germany, China, India, Indonesia and Singapore. More to come!

Website for My Apps (September, 2018)

On launching my apps on the app store, I have created a website to introduce the apps. The website is created specifically for my two apps, Math qCalculator and Matrix qCalculator. Both are iOS apps. More on iOS Apps.

React JS Javascript Serverless

Live view → (<https://www.qcalc.app>)

React Native Tic Tac Toe (July, 2018)

I have created a boilerplate project that can be extended easily to become a full working iOS/Android app. This game app is one of the example. I open-sourced this project. Furthermore, the app is available on App Store. Components created in this project is highly re-usable for many other things.

React Native Javascript iOS

Download on the App Store 📲 (<https://itunes.apple.com/us/app/rn-tic-tac-toe/id1409186251>)

Notesify (January, 2018)

A place where I store some of my notes on any topic. Quick to be accessed. Easy to be shared. Nice to be demoed. It is made on top of one of my experiments, an algorithm to summarize an article. The slide look and feel is powered by Reveal.js (<https://revealjs.com>) with a little modification.

React JS Javascript Reveal.js Serverless

Live view → (<https://www.notesify.co>)

Personal Blog (August, 2017)

A personal blog where I am sharing my experiments and findings in programming. The website itself is an experiment. Developed from scratch with Serverless architecture.

TrendCore February, 2015

Another take on different kind of CMS. It uses FileSystem to save data instead of Database. It translates any Java class into form where user can key in the data straight into it. Data read from FileSystem is automatically converted into Java object, allowing it to be manipulated programmatically.

Java

FileSystem

AngularJS

Bootstrap

CamNav January, 2015

A back-end application developed for another mobile app which works as its front-end. It can be used to store location data such as latitude, longitude and their associate information.

Java

Hibernate

AngularJS

Bootstrap

Source code → (<https://github.com/mjunaidi/camnav>)

TrendCycle CMS September, 2014

Is a work-in-progress on my own version of CMS. By using modular solution to store/create content; it allows user to define templates and store data based on templates created.

Java

Hibernate

AngularJS

Bootstrap

PathFinder July, 2014

An application to find the shortest and alternative paths between two nodes/stations.

Java

Hibernate

AngularJS

Bootstrap

Web Analyzer June, 2014

A website demo about a tool to analyze websites data.

Java PostgreSQL AngularJS Bootstrap

Source code → (<https://github.com/mjunaidi/web-analyzer>) Live Demo → (<http://web-analyzer.herokuapp.com>)

Workgroup Finder October, 2013

A web application to search/find workgroup.

Java Hibernate AngularJS Bootstrap

Source code → (<https://github.com/mjunaidi/workgroup-finder>)

iOS Apps

Math qCalculator (2018)

Made for the convenient to view the calculation in full. See all terms in the equation currently being in calculation. Easy to review. Fix any term if needed without having to re-calculate everything all over again. Add-on features: Matrix.

Note: Matrix is also available as a single app specially for Matrix calculations (See Matrix qCalculator below). More at [qcalc.app](https://www.qcalc.app) (<https://www.qcalc.app>)

iOS Swift

(<https://itunes.apple.com/us/app/math-qcalculator/id1435296651>)

Matrix qCalculator (2018)

Calculator specially made for Matrix calculations. Fast to create a matrix term. Quick to apply the matrix operations; transpose, inverse, determinant. More at [qcalc.app](https://www.qcalc.app) (<https://www.qcalc.app>)

iOS Swift

(<https://itunes.apple.com/us/app/matrix-qcalculator/id1434505248>)

Let's GoFish! (2018)

Based on classic card game Go Fish with a little twist. Player can choose to play with different match count either 2, 3, or 4 cards per set of same faces. Play against computer. Winning the game by winning the highest number of cards.

iOS React Native Swift

(<https://itunes.apple.com/us/app/lets-gofish/id1347516992>)

Panoramic Wallpapers (2018)

Get a random beautiful photo for your phone to be used as its background. Each photo will be specially resized to your phone screen dimension. Photos are from generous community of talented photographers at Unsplash.

iOS

React Native

(<https://itunes.apple.com/us/app/panoramic-wallpapers/id1392514688>)

MemoFish! (2018)

Memory card game with fishes. Try to find pairs of same fish in a group of cards. Starts with 4 cards. Unlimited guesses. Have fun!

iOS

React Native

Swift

(<https://itunes.apple.com/us/app/memofish/id1350346406>)

Get The Moonstone (2014)

Get The Moonstone is based on classic block removing game, but with an objective. The game uses gemstone as the block. Linked gemstones with the same color can be removed from the screen. More gem stones will fall to replace the removed stones. You will win the game if you can remove the moonstone.

iOS

Objective-C

(<https://itunes.apple.com/us/app/get-the-moonstone/id918752449>)
